

Smart. Secure. Integrated.

Businesses are at risk

Businesses are being increasingly targeted by cybercriminals to access confidential and sensitive information, for example business strategies, mergers as well as private information on their clients. Stolen information can be used by cybercriminals to blackmail a business and its clients. It can also be used for insider trading.

Stealing information to benefit from insider knowledge is not limited to outside interference. Businesses that have open access to documents leave themselves vulnerable to internal “bad actors” using privileged information to benefit themselves at the expense of the business and the client.

Multiple pressure points

Businesses are increasingly under pressure to protect themselves and their clients from internal and external threats. This pressure comes from a number of different sources:

Business security – a data breach could seriously impact a business’ reputation, leading to a loss of existing and future clients. Other effects could be unwanted media attention as well as legal action for professional negligence and other lawsuits.

Client requirements – clients are insisting that businesses implement measures and policies to protect their data. This requires them to restrict information access to only those team members who “need-to-know.”

Regulatory compliance – a growing body of new government and industry regulations are establishing rules and standards for the protection of client data. Failure to comply can result in severe financial penalties.

“There are two types of companies: those that have been hacked, and those who don’t know they have been hacked.”

CISCO CEO,
John Chambers

Security when and where it matters

This DocsCorp and iManage integration provides businesses with a comprehensive solution to protect them and their clients from damaging data breaches.

Security Policy Manager allows you to manage your global security policies, including ethical walls and barriers, at scale to meet today’s increasing client demands. Security Policy Manager delivers data protection without inconveniencing professionals by getting in the way of how they want to work.

cleanDocs integrates with Security Policy Manager to enforce global policies when emailing sensitive documents or client information internally and externally. Users are immediately prevented from violating policies to prevent a data breach. Compliant emails are subject to general recipient checking and metadata cleaning, for single touch-point protection.

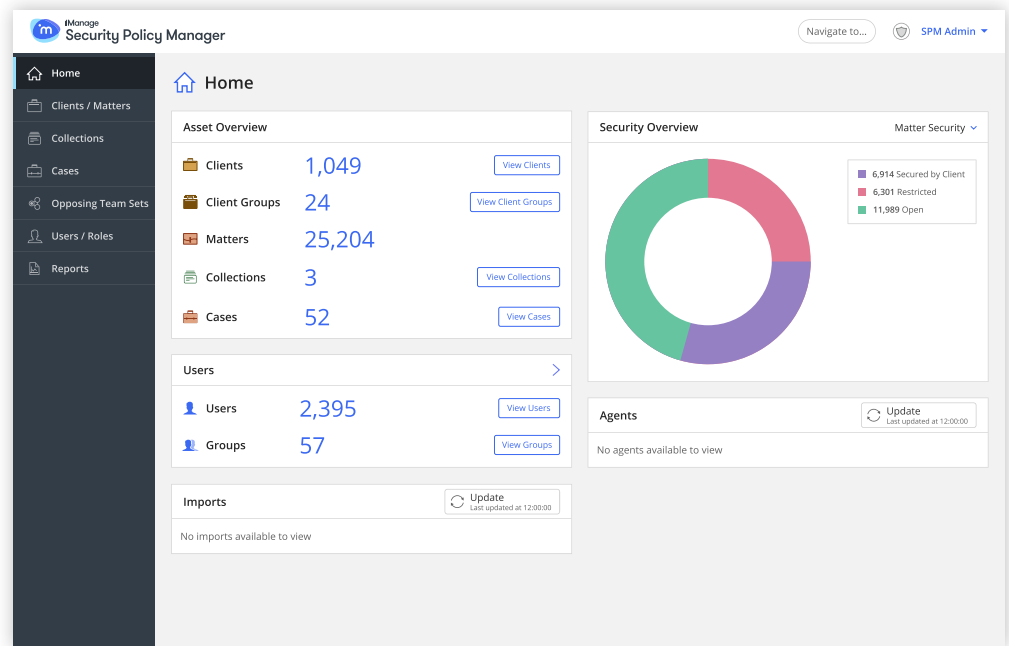

Security Policy Manager

Benefits

- Implement need-to-know security and ethical walls at scale
- Quickly respond to client and regulatory audits
- Manage security policies from anywhere

Supported systems

- iManage Work
- iManage Records Manager
- Network file shares
- Time entry systems

Easily manage global security policies at scale

Implement and manage ethical walls and client or project / matter centric “need-to-know” security with little impact on organization resources and systems.

Minimize your exposure to data loss

Segregating data helps to minimize the impact of a cyber breach. It limits exposure to documents accessible only by the person whose credentials have been compromised.

Be more responsive to client and regulatory audits

Advanced notifications, timeline, audit capability and dashboards allow you to monitor, enforce and report on security polices at the individual, group or organizational level.

Improve performance at scale

Eliminate system performance issues typically associated with large volume security policy updates. iManage Security Policy Manager is seamlessly integrated with iManage Work so security updates are efficiently applied.

Manage security polices anywhere and anytime

Intuitive modern responsive user interface ensures that security policies can be managed and monitored on any device – computers, tablets and phones.

About iManage

iManage transforms how professionals in legal, accounting and financial services get work done by combining artificial intelligence, security and risk mitigation with market leading document and email management.

cleanDocs

Benefits

- Prevent disclosure of confidential or sensitive information
- Reduce financial and reputational risk
- Ensure regulatory compliance

Supported systems

- iManage Security Policy Manager
- iManage Work 10
- iManage FileSite/ DeskSite
- Microsoft Office

Security policy enforcement for all emails

cleanDocs enforces data protection policies when emailing sensitive documents or client information internally and externally. cleanDocs checks emails with and without attachments against Security Policy Manager rules.

Instant alert when policies are about to be breached

Users are immediately prevented from sending emails when security policies are violated, protecting the firm from a data breach. Users must rectify the recipient list to proceed.

Out-of-the-box integration

cleanDocs integrates with iManage Security Policy Manager. It is simply a matter of turning the integration on. Integration with iManage Threat Manager will be available soon. iManage users will not have to invest in extra servers, connectors, or plug-ins to integrate with cleanDocs.

Remove metadata to prevent leaks

More than 100 metadata types will be removed from document attachments at sub-second speeds from emails sent from desktop and mobile users. This can be done on an individual basis or by a company-wide security policy.

Minimal disruption while working

cleanDocs is only invoked when the user presses the Send button. They will be advised if any recipients breach access security policies. Successful emails will be cleaned of metadata as part of the same process.

About DocsCorp

DocsCorp designs easy-to-use software and services for document professionals who use enterprise content management systems. We provide solutions for metadata removal, document processing, PDF manipulation, and document comparison.
